Intermediate : React/Redux   C/C++   PLSQL

Technologies

Git   Bash   AWS (S3, EC2)   Apache POI   Apache Maven   ag-Grid   jQWidgets

Development Strategies

SaaS Development   Agile Methodologies

EXPERIENCE

Software Developer I

May 2017 - Present

Value Centric, LLC.

An industry leader in pharmaceutical data analysis, ValueCentric's reporting tools help drive the business of over 200 companies worldwide, including AmerisourceBergen, one of the "Big Three" globally spanning pharmaceutical companies.

- Primary contributor to the design and implementation of our JavaScript/Coldfusion based Specialty Pharma Reporting suite, including Specialty Scorecarding and associated parameters, as well as integrating Specialty Data into existing infrastructure.
- Provided support for our React/Coldfusion based Generalized Scorecard, including implementing customer-specific features as well as a highly customizable Excel Export system via Apache POI.
- Functioned as general support for our existing JavaScript/Coldfusion based reporting suite. This includes R&D, bug fixes, and general cleanup of both modern and legacy code systems, as well as writing custom SQL scripts per customer request.

Full Stack Engineer

Sept 2016 – May 2017

ConfigurEx

An aggressive start-up seeking to fill a necessary niche in the market, ConfigurEx sought to bring custom-built, cloud-based sales software to small businesses across the country.

- Designed and implemented RESTful sales applications, contributing to an existing React/Java based stack which communicated with a MySQL database.
- Managed clients' needs throughout the development process, working directly with customers to define software specifications, website flow, and user experience.
- Ran bi-weekly meetings with clients, designed to provide constant development updates, review recent changes, and discuss any further corrections or additions.
